ChildProtect

Free immunizations for eligible children

2022 Schedule

What is ChildProtect?

Immunizations protect infants, children and adolescents from preventable diseases. Penn Medicine Lancaster General Health offers immunizations against childhood diseases to children in Lancaster County at no cost to you through Vaccines For Children.

Who is eligible for ChildProtect?

- Children with no medical insurance
- Children who are enrolled in Medical Assistance
- Children who are 0 - 18 years of age

Who is NOT eligible for ChildProtect?

- Children with health insurance coverage, including CHIP
- Children whose insurance does not cover immunizations or have high deductibles

Recommended Immunization Schedule

Age	Your child should get these shots

*Annual flu shots recommended every fall for children 6 months of age and older. Your child will need 2 shots the first year a flu shot is received.

Protect Your Children. Immunize!

Immunization is the most effective way to protect your children. Follow a schedule of immunization to help prevent these harmful diseases.

- **Chickenpox (Varicella)** can be serious, especially in young infants and adults. It causes a rash, itching, fever and tiredness. Pneumonia is also a common complication.
- **Diphtheria** can cause brain, nerve and heart damage, or death.
- **Hemophilus Influenza Type B (HIB)** is the leading cause of meningitis (inflammation of the covering of the brain and spinal cord) in very young children.
- **Hepatitis A** can cause jaundice (yellow skin) & vomiting with liver infection.
- **Hepatitis B** can cause severe chronic liver disease including cirrhosis, liver cancer, and death.
- **Human Papilloma Virus** causes genital, mouth and throat, and cervical cancer as well as genital warts.
- **Influenza** or “the flu” infants and the elderly are especially at risk of complications and death.
- **Measles** may cause ear infections, pneumonia, damage to the central nervous system (including the brain), or death.
- **Menigococcal Meningitis (Menactra vaccine for strains ACWY and Bexsero for the B strain)** affects the brain and is very contagious, often causing death.
- **Mumps** which cause painful swelling of the glands of the neck, can cause deafness and damage to the central nervous system, pancreas, kidneys and thyroid gland.
- **Pneumococcal Disease** causes pneumonia, blood infections and death.
- **Polio** affects children and adults, and can cause crippling paralysis of any part of the body.
- **Rotavirus** is an infection of the intestines causing diarrhea, dehydration and hospitalization among infants.
- **Rubella** is usually a mild disease in children. However, if a pregnant woman is infected, her baby may be born with serious birth defects.
- **Tetanus** causes death in about half of the cases.
- **Whooping Cough (Pertussis)** is a serious disease of the lungs, nose and throat. Cough can last 3 months. Death is common in infants.
